What is it? The SemWare Editor Professional (TSE Pro) is a compact, fully-featured text editor that is ideal for programmers, for users needing to manipulate data files (both large and small), as well as anyone needing a fast, powerful, general purpose text editor. Load as many files (long filenames supported) as Window's virtual memory will allow. Files may be loaded in normal text mode or in binary mode (great for editing/viewing non-ASCII files), and additionally offers a HEX mode view, which can be toggled on/off for each file. Use the editor's video macro to adjust the size of the editor's display on the Windows desktop, choosing one of the predefined window sizes, a custom defined size, or choose to use the maximum columns/rows of Windows desktop. Some of the many features of the editor include: Powerful macro programming language (over 500+ commands, including the ability to call DLLs) with debugger; multi-language compiler support; load and/or execute macros from within the editor, or from the command line; configurable menus/keyboard; block marking operations (includes column, character, and line based blocks); regular expression search/replace; color syntax highlighting; spelling checker; pop-up ASCII chart; Windows clipboard support (in addition to editor's internal clipboard); interactive configuration; context-sensitive help system; plus MUCH more! KEY FEATURES for this release of the editor are all new GUI; Wheel Mouse support; Font selection; Enhanced printing; Multilevel Undo/Redo; option to search subdirectories for matching files when loading or selecting files; macro to search external files for a string; dynamic visual brace match macro; Browse mode for Read-Only viewing of files; Handy startup menu option; Additional user-interface file, featuring common windows key assignments; New macro language events, and 70 new commands for the macro language are included in this release. The Editor's macro programming language offers more than 500 built-in commands and about 300 additional commands are available in the Editor's help system. By using powerful event-based programming, programmers can write advanced functions (including GUI control functions) that can be used by the editor to manipulate the program's user interface, and to interact with the editor's hardware. POP-UP ASCII CHART: The ASCII chart of characters is very useful and can be toggled on/off per file and/or saved/loaded for reuse. The ASCII chart provides easy access to many important special characters: · '&' symbol used to replace a selected block, · ':' symbol used to repeat text from a previous selection, · '>' symbol used to apply a text from previous selection to the current selection (this feature is referred to as "Replacement"), · 'T' symbol used to create a block above the current selection, · '' symbol used to display a special form of the selected text (this special form allows for access to up to 9 lines of text), · '#' symbol used to display the current line number of the currently selected line, · '@' symbol used to display the current column number of the currently selected line, · '' symbol used to display the currently selected line number of the currently selected column, · '!' symbol used to mark an interval of text, · ']' symbol used to mark an interval of text, · '-' symbol used to adjust the line height to improve readability. AN EXCEL-LIKE MENU SYSTEM: Macros are highly flexible and powerful, as they allow the editor to interact with the user interface without the need for a user interface script. In addition, the editor's function keys can be mapped to macro commands to activate the editor's default functions. In addition, the editor's menu system is built upon the familiar MS DOS-like "command line" structure of Windows. Macros can be called from within the editor, from the editor's "Run Macro" command, or from the Windows desktop. The menu system consists of three levels: · Level 1 - Contains basic menu items · Level 2 - Contains menu items that are available only when the menu system is in "Run Macro" mode, or "Macro" mode (the latter is the default when the menu system is accessed via the editor's "Macro 77a5ca646e

Athletic activities may affect bone health and influence the incidence of musculoskeletal disability in older adults. We examined the association between selected types of athletic activities and incident musculoskeletal disability in the ARIC cohort. In this observational study, participants who were free of disability at baseline were followed-up for the incidence of self-reported musculoskeletal disability. Athletic activities (yes/no) were self-reported in 1988 and 1990. Musculoskeletal disability was ascertained in 1992. Athletic activities were assessed by asking participants the frequency with which they engaged in each activity during an average week (yes/no). Three types of athletic activities were identified: weight-bearing, nonweight-bearing, and weight-bearing and nonweight-bearing. In adjusted analyses, only swimming (P =.03) and golfing (P =.01) were associated with incident disability. In ancillary analyses, fewer weight-bearing activities were associated with incident disability (odds ratio [OR] = 0.96; 95% confidence interval [CI] = 0.92-0.99; P =.03), whereas any nonweight-bearing activity was not associated with incident disability (OR = 1.02; 95% CI = 0.99-1.05; P =.12). Participation in weight-bearing activities, such as swimming and golfing, is associated with an increased
