See the websites `www.magentacommunity.com/tutorials` and `www.imaging-tutorials.com` for both Photoshop and Flash tutorials. The primary purpose of Photoshop is to edit images, perform special effects, and lay out pages. In Chapter 11, we show you a step-by-step approach to all of Photoshop's features. ## About Adobe Illustrator Adobe Illustrator is the premier vector graphics editor. In its many uses, it can be used for logo creation, icon design, and illustration. It provides several ways of laying out pages as well as its own drawing and type features. You can perform common tasks in Illustrator, such as creating and manipulating paths and text as well as doing basic shape editing. You can also create icons and bezier paths that function much like those of Adobe Fireworks. You can create a variety of art styles (as illustrated in Chapter 9). The primary purpose of Illustrator is to create vector graphics. ## About Adobe Fireworks Adobe Fireworks is a full-featured cross-platform professional vector graphics program that provides the ability to create, create animation, create special effects, and create other art. It allows you to create a variety of art styles (as illustrated in Chapter 9). However, although the features of Fireworks are very good, they don't provide the depth found in the features of Illustrator. For example, you can't create or edit special effects in Fireworks, and you can't create true vector graphics. Instead, Fireworks is a raster graphics-based program. ## About Dreamweaver Dreamweaver is a web design program that enables you to create websites, create e-commerce sites, create Flash websites, and create dynamic websites. It is much more powerful than Microsoft FrontPage. However, it does have its limits. For example, it can't create multipage layouts and has limited PHP support, but it's a very good program. Dreamweaver enables you to create a single page website or dynamic websites. It enables you to control the look and behavior of the various pages and features in a website. It also provides website structure and page "templates" (as illustrated in Chapter 5). Dreamweaver helps you create a website and a database that you can then import into other programs. It enables you to create a complete website and then publish it to a

Q: CSS grid how to get to the second row I have a grid, I have a header with a logo, next to that is navbar with icons and to the left is content. I have 3 different sections for the site and I want to be able to toggle between them. When you click the section it covers up the 3 sections and hides the navigation and so on. My issue is how to trigger the second row in the background. When it's hidden by the menu I want it to appear in the 3rd row, and vice versa. I'm also not allowed to use any external JS to achieve this. Fiddle .horiz-menu { height: 75px; position: absolute; width: 100%; bottom: 0; right: 0; background: red; overflow: hidden; margin-top: 30px; } A: You should be able to use the height property of your.horiz-menu element. Something like this should do what you're after: .horiz-menu { height: 75px; position: absolute; width: 100%; bottom: 0; right: 0; background: red; overflow: hidden; margin-top: 30px; } JS Fiddle demo. Or you could try giving your element class="hide" and using the :not(:target) selector: JS Fiddle demo. If you are able to add some JS, for example, you could add/remove a class on the.horiz-menu element when you transition back and forth. For example: JS Fiddle demo. This invention relates to wireless communication systems and, more particularly, to transmission power control in such systems. A wireless communication system serves a variety of subscribers depending on the particular system and the geographical area in which it operates. Typical systems serve subscribers having a particular range of distances, e.g., from about a few hundred feet up to several miles. The closest subscriber to a transmitter/receiver, or base station, will typically be the one that experiences the best performance, since the furthest subscriber from the base station will

-6-78-3){#F3} The presence of tumour antigens causes a higher antigen presentation capability of dendritic cells \[[@B8],[@B9]\]. The amount of antigen presenting cells is critically important for the induction of antigen-specific Th1 cells in tumour immunity \[[@B10]\]. Thus, the cellular immunity modulating capability of Nios II is suggested to be associated with its more potent DC maturation capability. In contrast, it is also suggested that the contact between DCs and cancer cells induces tumour-specific tolerance or activation of suppressive DCs for the induction of tumour-specific tolerance \[[@B11]\]. Thus, the DC maturation inducing capability of Nios II may counteract the suppressive function of DCs induced by contact with cancer cells. In addition to all these, Nios II is a TLR2/1 agonist \[[@B5],[@B6]\], and TLR2/1 is known to enhance the maturation of DCs by enhancing IL-1β and IL-6 production \[[@B4]\]. Furthermore, TLR2/1 also enhances IL-12 and IL-27 production \[[@B12]\]. Thus, Nios II may enhance the maturation of DCs by increasing IL-1β, IL-6, IL-12 and IL-27 production. Conclusions =========== We demonstrated that Nios II causes maturation of BMDCs and macrophages and stimulates T cell immunity in a murine DTH model, and the cellular immunity enhancing capability of Nios II is through the enhancement of DC maturation. Thus, Nios II may be a useful adjuvant for the delivery of cancer vaccine. Methods ======= Mice ---- BALB/c (H-2^d^) and C57BL/6 (H-2^b^) mice were purchased from Japan SLC. C3H/HeN (H-2^k^) and C3H/HeJ (H-2^k^) mice were purchased from CLEA Japan. Cell culture ------------ The EL4 thymoma cell line was purchased from Riken Institute (Tsukuba, Japan). The EL4 cells were cultured in RPMI1640 medium containing 10% (
