Q: Generate binomial random number without overflow Is there a function or function library in Python that can generate a binomial random number without overflowing? import random random.binomial(5, 3) Obviously, random.random() will not work. A: The simplest way I've found is to use scipy: In [6]: from scipy.stats import binom In [7]: binom.pmf(5,3) Out[7]: 0.29929436 But I just found that the 5th sample from the above is 0.2992275 - note the error is just about 4x the desired margin of error.

There are two types of adjustment layers: Dedicated adjustment layers Mask (or selection) layers Dedicated adjustment layers Adjustment layers can be attached to one or more specific layers. For example, if an image has been moved or resized, you can add a layer that has different changes. To add a dedicated adjustment layer: Open the Layers Panel. Click on the Filmstrip or Panel menu on the left side of the Panel, select Adjustments. Choose New Adjustment Layer and choose the type of adjustment (e.g., blur, brightness, contrast, etc.), then select where you want the effect to apply. Background (or other) layer Blur The blur tool can be used to blur the background or any other layer. Double-click the brush tool or press Ctrl + B. Click on a blurred area of the image to position the tool. Use the Tool options to choose the type of blur: Gaussian Gaussian Blur Use a slight pressure to easily blur some areas of an image. Normal Blur Use a stronger pressure to blur a large area. Uniform Use a slightly stronger pressure to blur the entire image uniformly. Radial Use a slightly stronger pressure to blur the entire image radially. To remove blur from an image, open the Layers Panel, double-click the brush tool or press Ctrl + X. To enhance the face, click the hand tool and move the mouse cursor over the eyes. Reduce noise and sharpen the image Reduce Noise Use the Reduce Noise filter by clicking on the image or by pressing Ctrl + U. Black and White The Black and White filter can be used to change the color of an image to black and white or shades of gray. Use the eyedropper tool to select a dark area on the image and then click the Black and White button on the Filter menu. Invert Colors The Invert Colors filter changes the color values in an image to the opposite of the color values in the image. Invert the colors of the image and then drag the Layers panel to move the layer and the effect. White Balance The White Balance filter changes the colors of an image to match the colors of white or
